Thank you for purchasing a JCM Customized/Specialty Product

The following JCM Order Data Sheet is provided to ensure that your product customization requirements have been received by JCM Industries and will be built to the criteria reflected on the data sheet. The Data Sheet provides the parameter questions that must be taken into consideration with recommending/fabricating the proper fitting for the application (type of pipe, size/OD of pipe, line pressure/content/temperature, coatings, etc.), and helps determine whether the product is suitable for long term performance under those conditions. If not suitable, JCM can provide recommendations for alternative products that can provide the performance needed.

The following data sheet is critical for building your product. Review the following details, confirm the information as recorded, or notify us with changes or corrections.

Read the entirety of the data sheet including the remarks and notes as listed.

Upon final confirmation of the data sheet, sign and date the sheet as shown and return to JCM for processing.

If a JCM generic drawing was submitted, be sure to indicate that on the data sheet under the “Generic Drawings” section and include that drawing with the signed data sheet.

JCM will not enter this order into our production system until the signed sheet is received.

Item(s) on the Data Sheet are non-returnable, confirmation from the manufacturer, through the purchase to the end user will ensure the product is shipped as specified for the application.

JCM appreciates the opportunity to provide your project with a customized fitting and should you have any questions or concerns, please contact our JCM Sales Team.
